

Package ‘assortnet’

October 12, 2022

Type Package

Title Calculate the Assortativity Coefficient of Weighted and Binary Networks

Version 0.12

Date 2016-01-18

Author Damien Farine <dfarine@orn.mpg.de>

Maintainer Damien Farine <dfarine@orn.mpg.de>

Description Functions to calculate the assortment of vertices in social networks. This can be measured on both weighted and binary networks, with discrete or continuous vertex values.

License GPL-2

assortnet-package	<i>Calculate the assortativity coefficient of weighted and binary networks</i>
	<i>~~ assortnet ~~</i>

Description

Functions to calculate the assortment of vertices in social networks. This can be measured on both weighted and binary networks, with discrete or continuous vertex values.

Details

Package: assortnet
 Type: Package
 Version: 0.12
 Date: 2016-01-17
 License: GPL2

Author(s)

Maintainer: Damien Farine <dfarine@orn.mpg.de>

References

Newman (2003) Mixing patterns in networks. *Physical Review E* (67)
 Farine, D.R. (2014) Measuring phenotypic assortment in animal social networks: weighted associations are more robust than binary edges. *Animal Behaviour* 89: 141-153.

assortment.continuous *Assortment on continuous vertex values*

Description

Calculates the assortativity coefficient for weighted and unweighted graphs with numerical vertex values

Usage

```
assortment.continuous(graph, vertex_values, weighted = TRUE, SE = FALSE, M = 1)
```

Arguments

graph	A Adjacency matrix, as an N x N matrix. Can be weighted or binary.
vertex_values	Values on which to calculate assortment, vector of N numbers
weighted	Flag: TRUE to use weighted edges, FALSE to turn edges into binary (even if weights are given)
SE	Calculate standard error using the Jackknife method.
M	Binning value for Jackknife, where M edges are removed rather than single edges. This helps speed up the estimate for large networks with many edges.

Value

This function returns a named list, with two elements:
 \$r the assortativity coefficient
 \$SE the standard error

Author(s)

Damien Farine dfarine@orn.mpg.de

Examples

```
# DIRECTED NETWORK EXAMPLE
# Create a random directed network
N <- 20
dyads <- expand.grid(ID1=1:20, ID2=1:20)
dyads <- dyads[which(dyads$ID1 != dyads$ID2),]
weights <- rbeta(nrow(dyads), 1, 15)
network <- matrix(0, nrow=N, ncol=N)
network[cbind(dyads$ID1, dyads$ID2)] <- weights

# Create random continuous trait values
traits <- rnorm(N)

# Test for assortment as binary network
assortment.continuous(network, traits, weighted=FALSE)

# Test for assortment as weighted network
assortment.continuous(network, traits, weighted=TRUE)

# UNDIRECTED NETWORK EXAMPLE
# Create a random undirected network
N <- 20
dyads <- expand.grid(ID1=1:20, ID2=1:20)
dyads <- dyads[which(dyads$ID1 < dyads$ID2),]
weights <- rbeta(nrow(dyads), 1, 15)
network <- matrix(0, nrow=N, ncol=N)
network[cbind(dyads$ID1, dyads$ID2)] <- weights
network[cbind(dyads$ID2, dyads$ID1)] <- weights

# Create random continuous trait values
traits <- rnorm(N)

# Test for assortment as binary network
assortment.continuous(network, traits, weighted=FALSE)

# Test for assortment as weighted network
assortment.continuous(network, traits, weighted=TRUE)
```

assortment.discrete *Assortment on discrete vertex values*

Description

Calculates the assortativity coefficient for weighted and unweighted graphs with nominal/categorical vertex values

Usage

```
assortment.discrete(graph, types, weighted = TRUE, SE = FALSE, M = 1)
```

Arguments

graph	Adjacency matrix, as an N x N matrix. Can be weighted or binary.
types	Values on which to calculate assortment, vector of N labels
weighted	Flag: TRUE to use weighted edges, FALSE to turn edges into binary (even if weights are given)
SE	Calculate standard error using the Jackknife method.
M	Binning value for Jackknife, where M edges are removed rather than single edges. This helps speed up the estimate for large networks with many edges.

Value

This function returns a named list, with three elements:

\$r the assortativity coefficient \$SE the standard error \$mixing_matrix the mixing matrix with the distribution of edges or edge weights by category
